REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The Applicant claims a method of operating a fuel cell system comprising a fuel cell stack and a plurality of fuel cells associated with the fuel cell stack, the method comprising: monitoring voltages of a set of fuel cells, and restricting coolant flow through the fuel cell stack when one or more of the monitored voltages decreases from a predetermined voltage range, wherein the fuel cell system further comprises a first end plate associated with a first end of the fuel cell stack, and the method further comprises heating the first end plate.

Applicant claims a method of operating a fuel cell system comprising monitoring voltages of a set of fuel cells and restricting coolant flow through the stack when one or more of the monitored voltages decreases from a predetermined voltage range.

In the prior art of record, Roberts et al., U.S. Pat. No. 6,329,089, teach methods of operating a fuel cell stack in which coolant flow during start-up is regulated based on a measured temperature parameter. Parise, U.S. Pat. No. 6,057,050, teach methods of cooling batteries using thermoelectric cooling devices, with regulation based on a monitored temperature.

However, the prior art of record, taken either alone or in combination, fails to disclose or render obvious, restricting coolant flow through the fuel cell stack when one or more of the monitored voltages decreases from a predetermined voltage range.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
